

OMNI'S VULNERABILITY ASSESSMENTS

PROTECT YOUR PERSONNEL AND YOUR BUSINESS – KNOW YOUR VULNERABILITIES BEFORE OTHERS DO.

Omni's Personnel Vulnerability Assessments uncover the hidden risks created by personal exposure—helping individuals and organisations stay ahead of threats targeting the human element. By combining digital footprint analysis with real-world insight, we deliver a clear, actionable view of where you're exposed and how to reduce it.

Methodology

Each assessment explores personal security practices, cyber hygiene, physical safeguards, and the individual's awareness of security.

Using open-source intelligence tools, we map the digital footprint to establish a baseline of publicly available information.

We conduct a respectful interview to gather context around lifestyle and security awareness. All gathered information is confidential.

Cross-reference the digital footprint with interviews to identify inconsistencies and key details to assess exposure of sensitive information.

What Can You Expect?

More than just insight—real protection. We identify vulnerabilities and provide targeted, practical recommendations to reduce risk and strengthen resilience. Whether proactive or reactive, our assessments give you clarity, control, and confidence—because visibility creates vulnerability.

Who is this For?

Personnel Vulnerability Assessments are designed for individuals and organisations with elevated exposure, influence, or risk, where understanding and mitigating human-centric vulnerabilities is critical to maintaining security, privacy, and resilience.

- Executives, board members, and senior leaders
- High-Net-Worth and Ultra-High-Net-Worth Individuals (HNWIs & UHNWIs)
- Public figures, influencers, and media personalities
- Government officials, politicians, judicial, and diplomatic personnel
- Organisations handling sensitive data, critical infrastructure, or high-value assets
- Individuals Exposed to Targeted Personal Threats including domestic violence, contested family proceedings, stalking, litigation, investigations, and online harassment

Exposure is inevitable. Exploitation isn't.
